Red Hat OpenShift

Red Hat OpenShift subscription calculator

Try our OpenShift calculator to determine how many subscriptions you'll need to turn your big idea into a reality

Get started

How many OpenShift subscriptions do you need to run your workloads?

Our simple calculator is designed to arm you with the correct number of OpenShift subscriptions. We base it on a few technical inputs like the number of VM/hardware cores as well as information about the applications you'll be running on OpenShift.

In just a few minutes

1. Take the assessment
2. Get your results
3. Share and take action

Start calculating your subscriptions

How many VM cores or Hardware cores do you have?

0 — 100

50
VM or hardware cores

What is your max OpenShift node utilization?

50% — 100%

80%
Max OpenShift node utilization

How much VM or Hardware MEM (GB) do you have?

- Please Select -

What is your average application memory footprint (in GBs)?

- Please Select -

How many total application instances do you have across Development, Test, and Production in your environment?

5
